In manual control system, the process operator observes the process condition and controls the system by doing manual adjustments. The Automatic control system uses any one of the continuous controller (P, PI, PID) to control the process based on the measurements and input. Example: Driving a car by yourself is manual control. Driverless Google car is an automatic control system. The manual control is very useful during emergencies, plant start up and plant shut down.

### **What is the difference between an automatic control and a ...**

What is manual system or what is automatic system : The main difference between manual and computerized systems is speed. Accounting software processes data and creates reports much faster than manual systems. Calculations are done automatically in software programs, minimizing errors and increasing efficiency. Once data is input, you can create reports literally by pressing a button in a ...
