The design of HP SAN systems is facilitated by using multiple port functionality and a simple, standardized approach to storage configuration. Flexible deployment HP SANs are made from a combination of Fibre Channel switches and Fibre Channel routers. A switch or network of switches uses a range of device addresses that is common among that network.

reference guide hp StorageWorks SAN design Twenty-First Edition (June 3, 2005) Part Number: AA-RMPNX-TE This document is a guide to designing and building HP StorageWorks storage area networks (SANs). It describes how Hewlett-Packard storage systems, storage management tools, and Fibre Channel products can be used in heterogeneous SANs.

hp StorageWorks SAN design

implement an HP standard SAN topology design, a subset or variation of an HP design, or you can design a custom SAN topology. Regardless of which approach you use, the final SAN design must adhere to the SAN design rules described in Chapter 3, "SAN Fabric Design Rules" and Chapter 4, "Heterogeneous SAN Platform and Storage System Rules." Before choosing your design, you should review the HP standard SAN topology section in this

fiSAN Design Basicsfl on page 11. SAN Basics. A SAN is a specialized high-speed network of storage devices and switches connected to computer systems. This white paper refers to the computer systems as servers or hosts. A SAN presents shared pools of storage devices to multiple servers. Each server can access the storage as if it were directly attached to that server.

SAN Conceptual and Design Basics - VMware

HP has a their "SAN Design Reference Guide". You can find it on the SPOCK site: <http://h20272.www2.hp.com/> That said, it doesn't tend to give the best of advice on all points. The biggest contention I've always seen is that it recommends putting multiple devices in the same fabric zone.
