Managing Gigabytes: Compressing and Indexing Documents and ...

We design two compressed data structures for the full-text indexing problem that support efficient substring searches using roughly the space required for storing the text in compressed form. Our first compressed data structure retrieves the occ occurrences of a pattern $P[1,p]$ within a text $T[1,n]$ in $O(p + occ \log 1 + \epsilon n)$ time for any chosen ϵ , $0 < \epsilon < 1$. This data structure uses at most $5nH_k$...

Search engine indexing - Wikipedia

In computer science, an inverted index (also referred to as a postings file or inverted file) is a database index storing a mapping from content, such as words or numbers, to its locations in a table, or in a document or a set of documents (named in contrast to a forward index, which maps from documents to content). The purpose of an inverted index is to allow fast full-text searches, at a cost ...
