Some medicines are preventive, such as immunizations, contraception, and allergy medications. Screenings, such as tests for skin cancer, high cholesterol, and colonoscopies, are effective preventive measures. The goal of preventive care is to help people stay healthy. The idea is to nip diseases in the bud before they become catastrophic.

### **Preventive Care: Definition, How It Lowers Health Costs**

Preventive health screenings and primary care consultations have also been found to significantly increase life expectancy, particularly among the 30- to 49-year age group. To aid this effort, we compiled a lifetime health care schedule organized by age and covering the following preventive medical care recommended by the National Institute of Health (NIH):

They put healthy hamsters and hamsters infected with SARS-CoV-2 (the COVID-19 coronavirus) in a cage, and separated some of the healthy and infected hamsters with a barrier made of surgical masks. Many of the "masked" healthy hamsters did not get infected, and those who did got less sick than previously healthy "maskless" hamsters.
